## **DETAILED ACTION**

### ***Election/Restriction***

1. Restriction to one of the following 1064 inventions from table 3 is required under 35 U.S.C. 121:

Claims 1-6 are drawn to methods of identifying the genotype of an individual or to analyzing a nucleic acid sample by determining a base occupying one of the polymorphic sites identified in table 3. Table 3 recites 1064 different polymorphisms, and thus 1064 different nucleic acids. Nucleic acid sequences encoding different proteins are structurally distinct chemical compounds and are unrelated to one another. These sequences are thus deemed to normally constitute independent and distinct inventions within the meaning of 35 U.S.C. 121. Absent evidence to the contrary, each such nucleotide sequences are presumed to represent an independent and distinct invention, subject to restriction requirement pursuant to 35 USC 121 and 37 CFR 1.141. This is not an election of species.

Should applicant traverse on the ground that the sequences are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Art Unit: 1634

2. Because these inventions are distinct for the reasons given above and the search required for a group is not required for the other groups, restriction for examination purposes as indicated is proper.

3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).

#### ***Nucleic Acid Sequences***

This application contains sequence disclosures that are not identified by SEQ ID NOS (Tables 3 and 5). Sequence disclosures in the specification must be identified by SEQ ID NOS (that is, not only do the sequences have to be disclosed in a sequence listing, but each sequence recitation in the specification and the claims must be followed by a sequence identifier so that the sequences can be searched). It is further noted that once applicant elects a specific polymorphism from table 3, the table is unclear as to which sequence (or SEQ ID NO) the polymorphism can be found in. See MPEP, section 2422.
